* The average spreads shown here are calculated throughout the day. They tend to be narrower under normal market conditions. However, spreads may widen following important news announcements, during political uncertainty, unexpected events leading to volatile market conditions or at the close of the business day and on weekends when liquidity is lower. When you trade with us Trading Point is your counter-party. Your trades are matched and any next exposure above predefined thresholds is hedged with our partner banks (our liquidity providers) at the current market spread. However, during volatile and illiquid market conditions our liquidity providers quote larger than normal spreads. At such times Trading Point is forced to pass on some of the spread increases to its clients.

** If you leave an open position for the next trading day, you pay or you obtain the certain amount, calculated on the basis of interest rates difference of two currencies in currency pair. This operation is called "swap." In the trading terminal, "swap" is automatically converted into the deposit currency. The operation is conducted at 00.00 (Trading Server time, GMT+2) and can take several minutes.

***Minimum level for placing Stop Loss and Take Profit orders from a current market price.
